Basic Risk Assessment

General Information

This course provides learners with the knowledge to understand and implement effective Basic Risk Assessment within the workplace. Risk Assessment is a practical and systematic methodology employed globally, especially within the energy / processing industry. Learn from experienced technical safety practitioners on how risk assessment can transform your organisation. This course answers and address several important issues :

- What are hazards and risks?
- What are the hazards applicable for your facility?
- Who / what can be harmed?
- How likely are hazards to occur?
- How can we categorise our hazards?
- How can we prevent the hazards from happening?
- How can we minimise the effects or recover from the hazards?
- How effective are our risk control barriers?

This course comprises 1 day of classroom style tuition with practical example exercises throughout to illustrate the key concepts. Participants will also be guided through a mock Risk Assessment workshop exercise where they will be able to put into practice all the knowledge from this course.
